

Millie Mova

The Millie-Mova is an easy to use manual handling system to help move people safely while they are seated. This simple chair moving device makes mealtimes safer and easier when moving people to and from the meal table.

Millie-Mova helps eliminate the risk of back, hip, knee and shoulder injury for the carer. When moving the person in the chair closer to the table the transition is smooth due to the front legs being lifted slightly off the floor which enables the front wheels so there are no uncomfortable jolt like movements compared to a chair that doesn't use a Millie-Mova.

Can be used on chairs with wooden or metal frames.

Suitable for clients up to 130kg (20 Stone).

A chair fitted with the Millie-Mova retains high stability, incorporates an automatic brake, when unoccupied.
